

Auto-rotation and Cleaning

Automatic statistics and backup management parameters are configured here:

Screenshot: Auto-rotation and Cleaning settings window

AUTO-ROTATION AND CLEANING

Delete events from log after:	<input type="text" value="1"/> day(s) (from 1 to 90)	Delete events from Events Log after specified period of days.
Statistics archiving delay:	<input type="text" value="0"/> day(s) (0 - do not archive)	Archive statistics in advance. Each day minimize time needed for backup.
Statistics rotate delay:	<input type="text" value="100"/> day(s) (0 - do not rotate)	Rotate statistics to archive after specified number of days.
Delete not actual rates after:	<input type="text" value="360"/> day(s) (0 - do not delete)	Delete rates from system, when they are not actual and effective date is older than specified number of days.
Delete parsed XDR-files after:	<input type="text" value="180"/> day(s) (0 - do not delete)	After what number of days already parsed and processed XDR-files should be deleted from local server.
Delete archived log-files after:	<input type="text" value="90"/> day(s) (0 - do not delete)	After what number of days archived log-files should be deleted from local server.

Field	Description
Delete events from log after	Specify the number of days , in which events will be removed from the log-files (when 0 is the value – events won't be deleted)
Statistics archiving delay	Here, it's possible to archive the statistics in advance to reduce the backup time.
Statistics rotate delay	Specify statistics packages rotation delay (for example, if you enter 3 as a value, all statistics packages that are older than 3 days will be automatically archived)
Delete not actual rates after	Cleans non-actual rates from database when effective date is older than a specified number of days
Delete parsed xDR-files after	Define when the system should delete old parsed xDR-files
Delete archived log-files after	Define when the system should delete archived log-files
