Security Request Token:		validate the merchant account.
Security Response Token:		20-Character alphanumeric unique Response-Token provided by Ukash. The token is use to validate the merchant account.
		Unique Brand ID provided by Ukash

Configuring Payment Gateways

To configure the gateways, you need to select a **Reseller** by using **Settings for** drop-down menu in the top-right corner of the section (see screenshot below). It means that **all clients** belonging to the selected Reseller will have these settings. The settings depend on the payment system and can include specific options for each. Below, as an example, you can find a description of fields that have to be specified while choosing the **QIWI** service.

Screenshot: Settings for a drop-down menu

Field	Description	
Email	Respective QIWI email that should be used	
Provider ID	Identification number of a QIWI provider	
IP	QIWI gateway IP. Specified IP address must be separated by a comma without spaces	
Payment Account	Payment account that should be used for payment from respective payment gateway	
Description	User will see this text as a tool-tip for the current payment method	

What is more, you may specify the order of displayed payment methods (if more than one method is selected) in the *Order position* field in the top-right corner of the **Payment method** section.

Screenshot: Order position field

Attention

For proper work of the PayPal service, you should enable access for a list of IP addresses in your Firewall settings, which can be found here.

Moreover, you can find a *detailed description on how to enable IPN* by visiting the following link.
