- Sharing a Report

Section overview

This section represents a **route analyzer tool** that allows to manage dynamical routes and simulate different routing models without hurting live voice traffic. It should be noted that this tool can be used only in case you are using the **Dynamic Routing feature**.

The Routing Analysis section represents a query form with the following parameters:

Screenshot: Routing Analysis form

Attention

Please note that if there are changes in *the Term Rate Table*, you need to launch *Dynamic Routing Manager* in the Task Scheduler section (System > Task Scheduler). Routing Analysis shows routes based on the routing table built on the last run of the *Dynamic Routing Manager*. So you won't be able to see the latest changes regarding Routing Rules until Dynamic Routing Manager is **restarted**.

Creating a Routing Analysis Report:

To generate routing analysis, enter the next parameters in the query form:

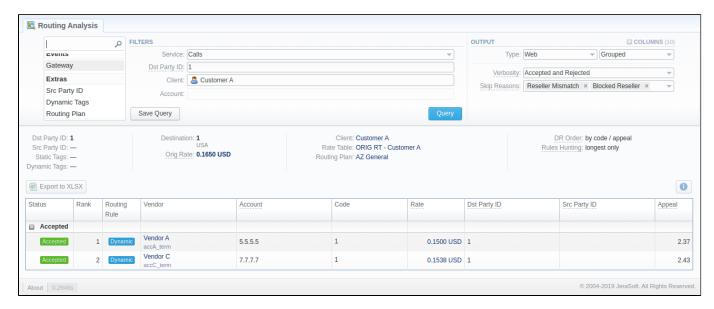

Section	Field Description				
Filters	In the Filters menu, select desired parameters for the report. To cancel any filter, click the delete icon 🗱 next to the filter.				
	You can use a quick search by typing filters' names in the respective field at the top of the filters list.				
	Service Select the service for the report. By default, the field value is set to Calls. This field is mandatory.				
	Dst Party ID Enter the destination party ID to define a destination. This field is mandatory.				
	Client Select a client for the report. Also, you can specify respective call shops. This field is mandatory.				
	Accou nt Select an account for the report.				
	Additional Filters				
	There are the following accessible additional filters: • Events: Gateway. • Extras: Src Party ID; Dynamic Tags; Routing Plan.				
	Events Settings				
	Gatew ay Define a gateway specified in the term account				

	Extra Settings					
	Src Party ID	Specify a source number or any other source identification to check the translations				
	Dyna mic Tags	Enter additional dynamic tags for this routing				
	Routin g Plan	Enter the plan with a respective routing rule				
Output	This form contains settings of the output data of the report.					
	Click the plus icon are Columns to select respective columns to output report data. Also, you can cancel any chosen item.					
	Accessible columns in the report					
	Following columns can be added to the report: Status, Rank, Routing Rule, Vendor, Account, Code, Rate, Dst Party ID, Src Party ID, Appeal, Reject Reasons.					
	Status	The following information is displayed in the column: the state of the route, reject reasons (if any)				
		for accepted route				
		Rejected for rejected route due to some reasons (to see them, hover over the icon)				
		To view detailed information on a rejected route status, hover over a corresponding icon in the column.				
		Screenshot: Detailed information on a route status				
		Bula				
		REJECT REASONS - Client Capacity				
		Rejected - Profit Margin				
		Drivated 2 Durania				
		Rejected 2 Dynamic				
	Rank	k Vendor position during routing. It's applicable and the system puts values in order when route status is accepted.				
	Routin g Rule	Type of the route that includes: destination, policy and rule properties (balancing, priority), time profile, orig groups, term groups, debug information				
	A grey Static icon in the column shows a static route					
	A violet icon indicates a <i>DID route</i>					
		A blue Dynamic icon in the column shows a dynamic route				
		To view detailed information on a route type hover over a corresponding icon in the column.				
		Screenshot: Detailed information on a routing rule				
		Dynamic Vendor A accA_term 5.5.5.5				
		Code: *				
		Policy: Proportional				
		Priority: 1 Balancing: 100%				
		Rule ID: 11				

Vendor	The name of the respective terminator specified in the Client's settings and its account name					
Accou nt	The name or IP of the account					
Code	Here you can see matched code in the terminator's rate table					
Rate	Rate that is used to terminate the call					
Dst Party ID	Shows destination party ID that is sent to the provider when all matching number translations are performed					
Src Party ID	Shows source party ID after all number translations					
Appeal	Shows the appeal automatically calculated by the system according to the chosen DR Policies (Routing section > DR Policies)					
	The Appeal is displayed as a value if a route is dynamic. For this route type, you can hover over the appeal value to get additional insights on ASR, ACD, SCD, PDD, Vendor Debt, Payment Due, Stats Qty. If a route is static, it's displayed as N/A.					
Reject Reaso ns	Displays respective rejection reasons for a particular route					
Other o	utput settings					
Select a look of table view next to the Type field: • <i>Plain</i> - a simple table view • <i>Grouped</i> - a table view with grouped data and possibility to collapse it • Attention Please note that the <i>Grouped</i> type of a table view is available only for Excel XLSx and Web formats, it doesn't wo or Excel XLS.						
Verbo	If CSV, Excel XLS or Excel XLSx type has been selected, an additional Send to field will be displayed. In this field you can specify emails of the clients, where the current report in the selected format will be sent. Select which routes should be displayed (accepted and rejected, or accepted only).					
Skip Reaso ns	Specify the reasons under which routes should be excluded from the output list. The available skip reasons are: Reseller Mismatch Blocked Reseller Blocked Client Blocked Account Vendor Qty Stop Hunting Party ID Length Profit Margin Rate Increments Orig Tags Trem Tags Trem Tags Treffic Processing Reseller Capacity Client Capacity Client Capacity Rule Capacity Quality Vendor Credit Limit					

 $After selecting all needed parameters, click the {\bf Query} \ {\bf button} \ and \ the \ system \ will \ generate \ a \ report.$

Screenshot: Routing Analysis

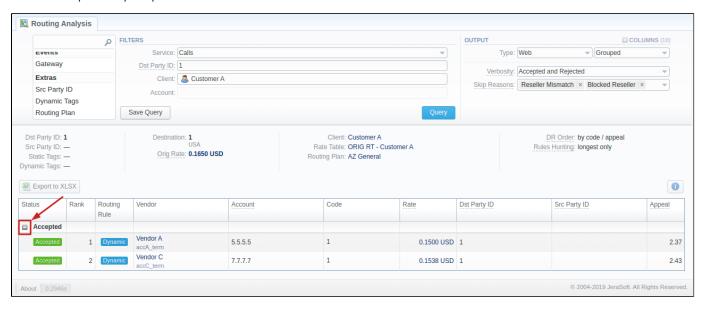

Moreover, you can create (save) and display previously saved report templates by licking **Save Query** and **Load Query** respectively. Keep in mind that the load button will be present only if there is at least one routing analysis report in the **Report Templates** section.

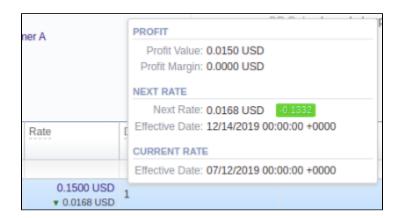

To find more details about templates, please refer to the Report Templates article in our User Guide.

To expand or collapse data in your report, click the plus or minus icons. If the data is **Grouped** in the report, it will be shown **initially expanded**. Screenshot: Expand/collapse report data

If applicable, you can check the future terminator's rate, its effective date, and profit in the report by hovering over a current rate in the Term Rate column

Screenshot: Future Terminator's Rate

Please note that it analyses the profitability by comparing orig and term rates. Therefore, an orig rate should be equal or greater than a term rate and profit margin.

Attention

Please note that if a Reseller has an orig rate assigned, the profit margin will be counted taking into account both client-originator's rate and Reseller's

By hovering over the Info ucon above the report on the right, user's name and time/date when a report was generated will be displayed in a pop-up

Screenshot: Info icon

Generated by: Administrator on 01/24/2018 16:17:47 +0000

Export a generated report

You can export report data either in a .xlsx or .csv file that would contain currently presented data. Click the Export to XLSx or Export to CSV button to download a file of the respective format. Be advised that the Export to CSV button is only available if Output is set to Web/Plain.

Attention

Please note:

- 1. Inactive additive rates with non-zero value (for respective tags) won't be shown. Active additive rates with zero value will be shown.
- 2. If you change the currency in the Settings, you need to restart Dynamic Routing Manager in the Task Scheduler section for immediate Routing Analysis functioning.

Sharing a Report

Each time you get a report output, the system generates a unique link in the format of "/view?id=<uniq-string>". It allows sharing data between the users, even if they belong to different resellers (the feature works similarly to Share by Link in Google Drive).

The link refers to the report data valid for a specific moment.

Example: When you send a link to a report, you ensure the recipient would see the same data as you do. If you change data in the system (for example, perform rerating), the previously copied link to the report will display data valid for the moment of generation (even though the actual data is now different).

You can also view the additional information about the generated report by hovering over the Info Uicon, which is located under the Output section:

Title	Description
Generated by	Indicates the Role of the user who generated a report and specifies a generation time
