## **Export**

Rates export provides great flexibility in configuring the way rates will be exported in .csv or .xlsx files. To access the export settings, click the Export button in the Rates section.

Screenshot: Rates export button

You can use the same advanced search tool, as provided on the Rates tab, to choose which rates you would like to export (including *all, past, current, future,* or *current/future*) prior to actually doing it. After clicking a respective button, the following settings will be visible:

Screenshot: Rates exporting window

Field	Description					
Export Template	Select an export template or save an existing one using the Save button					
Output Format	Specify output file format, .xlsx or .csv					
Fields Delimiter	Set delimiter for fields if you've chosen .csv					
With headers row	Include column names into the file					
Export Columns	Here you can select from the drop-down list of maximum 25 columns to export:					
	Src Code/Src ode Name	Src Code/code name of rates				
	Code/ode Name	Code/code name of rates				
	Effective Date	Start date, before which the rate will not be used				
	• Rate	Price per unit, specified in respective service settings				
	Billing Increment	Min Volume, Interval and Grace Volume combined, and their order				

• ,								
	Min Vo	lume	Minimal time interval of tariffed calls					
• Interval			Tariffication interval					
Grace Volume			Free of charge unit					
Setup Fee			An initial fee that is charged when event duration is longer than 0 seconds					
Time Profile			Time profile (all time, business time, non-business time, weekends)					
• End Date			A final date, after which the rate will expire					
Number Length min			Minimum number length					
Number Length max		Maximum number length						
Previous Rate		Last rate in usage						
Prev Diff		Cost changes in the rates						
• Prev Diff (export)			Cost changes in the rates after the last export					
Prev Diff Status			Difference between a current rate and a previous one					
•	Prev D	iff Status (export)	one.	-				rate differs from a previonan the <i>Last Notification</i>

	Service	Service of a rate				
	Tech Prefix	Tech prefix of a rate				
Last Export Date	Parameter that affects the Rate changes field (depending on it, the exported rates will be marked as new, changed, deleted, etc.)					
Code Deck	Select a code deck here to rewrite code names in an export file if needed					
Codes from code deck	Allows you to filter the export by selecting only codes, which are present in a specified Code Deck					
Codes Output	Specify how codes must be displayed. The options are:					
	Separate rows	Each code is placed into a single row				
	Delimited list	Codes are grouped by a code name in a row, for example, 5510, 5511, 5512				
	• Ranges list	Codes are grouped by code name into ranges plus delimiter, for example, 5510-5512, 5515				
Date Format	The date format in your export file. The syntax is as follows: if you indicate %d-%m-%Y here, your date will look like 25-03-2018					
Billing Increment	Select these parameters here and drag them to align anyhow:  • Grace Volume • Int • Min					
Header text/Footer text	Allows you to put some text into an exported file as header and footer, respectively					

You may save settings as a template of Rate Notification. But note that a reseller's rate notification template will be overridden by the existing rate export template.

Click the **Process** button and save an exporting file when you finish configuring the parameters.

Rates sorting will be made by the very first column. For example, if you want rates to be sorted by A-Z destination name, make **Code Name** your first column.

Please note, that for reseller's rate notification, existing rate export template settings have higher priority than personal.
