Section overview

Taxes profiles, equally as Time profiles, is a JeraSoft Billing tool that makes the process of clients' rate tables management exceptionally agile. Taxes profile is a **set of tax rules** that can be applied to client's rate tables in different taxation schemes. This section allows you to add, edit, and delete profiles and is presented in the form of a table with the following columns (see screenshot):

Screenshot: Taxes Profiles section

Column Name	Description
ID	Taxes profile's identification number
Name	Name of a taxes profile
Profile Owner	List of resellers corresponding taxes profile was assigned to
Notes	Additional information regarding a taxes profile

Functional buttons/icons, presented in the section, are as follows:

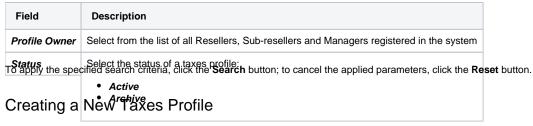

Button/Icon	Description
• New Taxes Profile	Allows to create a new taxes profile
\	Allows to manage an existing taxes profile on a list
*	Allows deleting a taxes profile from the system. Requires confirmation
%	Allows to manage a list of tax values of a particular profile
	Opens the Advanced Search drop-down menu

Advanced Search

In the top right corner of the section above the table, an **Advanced Search** drop-down menu is located. By clicking on a blue downward arrow icon, a drop-down menu with the following structure is displayed:

Screenshot: Advanced Search drop-down menu

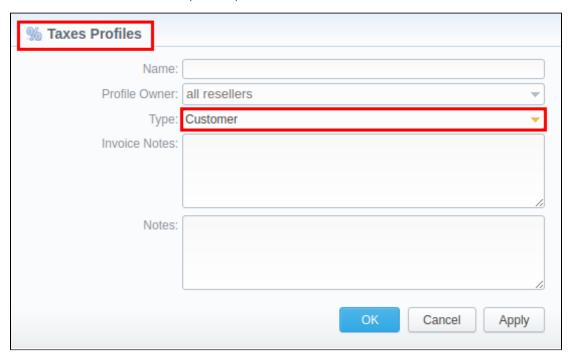

To create a new profile, you need to:

- Click the **New Taxes Profile** button
- Fill in mandatory fields (specified in the table below)
- · Click the OK button

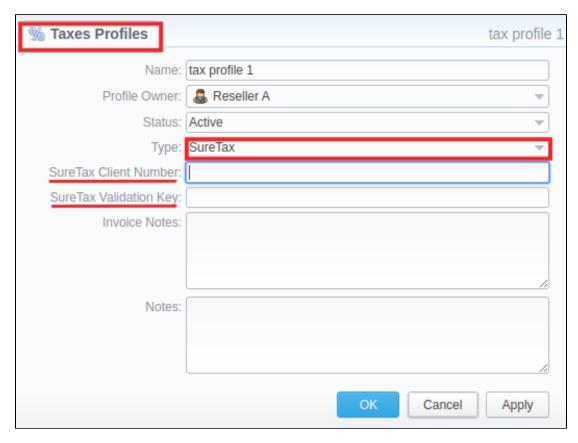

Starting from **JeraSoft Billing v3.21.0**, we have introduced the integration with a third-party tax calculation service called **Compliance**. In addition to **SureT ax** service we had integration with before, now you have one more advanced option to calculate taxes. Please also note that there are no pre-generated taxes profiles in the system anymore.

You can select the type of a taxes profile while creating a profile:

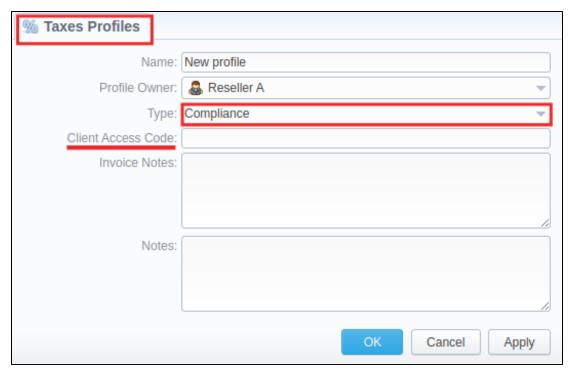

Screenshot: New Taxes Profile window (Customer)

Screenshot: New Taxes Profile window (SureTax)

Screenshot: New Taxes Profile window (Compliance)

Field	Description
Name	Name of a taxes profile
Profile Owner	Select from the list of all Resellers, Sub-resellers and Managers registered in the system

Туре	Select the tax profile type from a drop-down list: Customer SureTax Compliance
SureTax Client Number	Used when issuing invoices for clients with selected SureTax profile
SureTax Validation Key	Used for clients with selected SureTax profile
Client Access Code	Used when issuing invoices for clients with selected Compliance profile
Invoice Notes	If specified, this information will be displayed in issued invoices
A4	Additional information reposition a torre modile

(i)

While using **SureTax** or **Compliance** profile type, the taxes values cannot be managed manually in the system as the taxes will be automatically dipped from third-party tax calculation services. Only the **Customer** profile allows managing the taxes values.

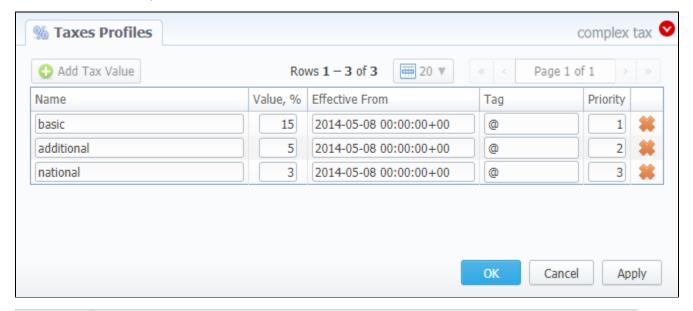

Please note that you cannot change the taxes profile type after creation is completed.

Tax Values Management

To manage a tax value within the **Customer** type of the taxes profile, you need to click the icon to the left of a corresponding profile name on the list. In the pop-up window, you can add a new rule by clicking **Add Tax Value** or edit already existing values. The structure of a pop-up window is as follows:

Screenshot: Tax Values Management

Field	Description
Name	Name of the tax value added to this profile
Value	Specify a tax value in %
Effective from	Start date of a corresponding tax value
Tag	Specify tag(s) you would like to be applied to corresponding tax value. If no tags are added, you can leave the field blank
Priority	Specify the priority of tax value usage

While operating with tax values, you can apply **Advance Search** to find the value you might be interested in. To do so, click on a red downward arrow **V** is con in the top right corner of the pop-up window and set the **Status** and **Status Date** fields:

- o current on if chosen, all tax values with the latest Effective from field value will be displayed
- o old for if chosen, all tax values, whose Effective from field value is older in comparison to its current one, will be displayed
- o future for if chosen, all tax values, whose Effective from field value > Date, will be displayed
- o all if chosen, all tax values will be displayed

• Date - set the time and date that will be applied for the search.

By default, tax values displayed in a pop-up window are filtered by the *current on* status.

In cases when you determine a **Priority** status, you basically set the order of the taxation. So, the tax with **Priority 1** will add % tax to operation sum, the tax with **Priority 2** will add tax % to the **resulted sum** (operation sum + 1St tax %). Each following priority will add % tax to operation sum plus all the previous priorities values.

For example:

If operation sum is 100 USD, and there is a single tax with Priority 1 and a value of 10%, the taxation result will be 10 USD, so full operation plus tax is 110 USD.

If there are **two taxes** with priorities of 1 and 2, and values of 10% and 20%, respectively, then the **first tax yield** will be **10 USD**, and **second tax yield** will be **22 USD** (because 20% is calculated from sum of operation + previous tax), and total will be **100 + 10 + 22 = 132 USD**.

You cannot delete or archive a tax profile that is currently assigned to the Client, Call Shop, Reseller, or Calling Card
