Dynamic Routing Table

The **JeraSoft Billing solution** operates with its own ***Routing Table*** that is automatically generated over specified regular periods to provide the ***"dynamic"*** *part of the routing*.

The **Routing Table** deals with the latest changes of the whole routing process, including all updates made to system configuration, such as clients or rates updates, changes to routing plans, accounts reconfiguration, etc. It is always a good idea to recreate your routing table to be able to see how your routing will work with current settings. Of course, if you don't have time to wait till it is created automatically, you can do that in a manual mode.

To generate a routing table manually, please **go to System > Task Scheduler,** and **click the**  **icon** opposite ***Dynamic Routing Manager***.
