API Testbed

This section allows sending/receiving JSON-RPC API calls via the web interface. It is important to understand that this section allows you to **actually run** API requests, and **it is not a simulation**. So, if you requested to delete or modify a client by running an API request, this client will be actually deleted from the system or modified.

Screenshot: API Testbed settings

Field	Description
JSON-RPC URL	URL is set by default according to current server settings
Module	Select which module to call
Action	Set which action to call
Login	Specify a login that will be used during the call
Password	Specify a password that will be used during the call
Parameters	Enter JSON data that will be sent to the API

After the Send Request button is clicked, you will see:

- API Request full JSON message that has been sent;
- API Response full JSON response from the RPC server.

Both request and response are shown as JSON tree with the ability to switch to RAW JSON (see screenshot below).

Screenshot: API Request & API Response

Warning

- API Testbed allows only to test Management API, not CoreAPI.
 If the user has access to delete gateways via API Testbed, he can remove all gateways regardless of which Reseller owns a respective gateway.
