

Client Panel

The **Client Panel** is a separate application integrated with JeraSoft Billing via API. It has a user-friendly interface and is tailored for your clients to manage the services they purchased. For example, they can check their rates, refill balance, update contact and billing details, check a detailed call history with all related statistics and cost.

It has been designed to be as simple and easy to understand as possible and should cut a lot of basic customers' questions. The panel is provided as an open-source, so it can be used as a starting point for your own development or as a reference and example.

Tip

Starting from the **JeraSoft VCS 3.13**, the Client Panel will be hosted by default on 9080 port. To access it, open <http://VCS-IP-ADDRESS:9080/>. Moreover, you could assign your own domain name to the panel.

Functional advantages

1. Fully API based

The system is fully based on API integration. Therefore, it does not require any direct access to the JeraSoft Billing database and provides a more secure approach.

2. Can be hosted separately

You can move the Client Panel to other server and just configure JeraSoft Billing IP address in the API settings. As a result, you can fully isolate JeraSoft Billing from the public Internet.

3. Full Open Sourced

The panel comes with all source code. It allows you to either customize the system or extend it, or just use as a reference guide for the development of your own panel.
